

BROTHER TN-850 Toner Reset Instructions

April 3, 2017

1. Take out the new toner that is not resetting.
2. While holding the toner by the handle with your right hand, look at the left hand side of the toner, on the end.
3. Look for a round plastic protruding enclosure that is partially cut open and has a “paddle wheel” or lever mechanism inside of it (sometimes also called a reset gear.)
4. Turn the paddle wheel or lever mechanism counter clockwise a quarter of a turn with your finger, until it locks into place so that the paddle or lever is now standing straight up.
5. If it does not turn and it has a paper clip-like spring on top of it, use a pen to lift the spring up and turn the paddle counter-clockwise.
6. Now put the toner back into the machine.
7. The machine should now recognize the new toner.
